

BED BUG POST-TREATMENT INSTRUCTIONS

Your treatment includes 3 services with a 120-day warranty after 1st initial service

What to Expect After Treatment

- We have applied a residual insecticide designed to keep working throughout our treatment process.
- You may continue to see live or slow-moving bed bugs for 7–28 days after service. This is normal.
- Most infestations require 3 or more treatments for complete control.

After treatment, you may notice bed bugs move more than usual (normal exposure behavior) and a gradual decline in bites and sightings.

Re-Entry Instructions

Do not enter treated areas until all surfaces are completely dry (typically 2-4 hours).

Avoid – harsh cleaners and detergents while mopping and/or cleaning floors, baseboards, bed frames, furniture joints, or cracks/crevices, or shampooing carpets in treated areas. These areas were specifically treated to leave a residual barrier. Cleaning removes the product and reduces effectiveness.

Sleeping & Room Use

- You may continue sleeping in the treated bed/room every night
- Avoid relocating to another room. This may increase the chance of spreading bed bugs to other rooms.

Laundry Instructions

- Wash and dry all bedding, clothing, and linens on high heat
- Dry items for at least 30 minutes on high heat
- Store cleaned items in sealed bags or bins until infestation is eliminated

Clutter Reduction

- Keep clutter to a minimum. A clean well-kept home aids in reducing harborage areas
- Do not move items between rooms
- Avoid bringing new or used furniture into the home during treatment

The introduction of new or used furniture into the unit or home will void the warranty.

Pets & Family Safety

- Keep pets and children away from treated areas until dry
- Once dry, treated surfaces are safe for normal use when label directions are followed

Optional tools

We do encourage and provide Mattress Encasements (recommended but not required) for an additional cost.

Important Do NOT's

- Do NOT apply over-the-counter pesticides or sprays
- Do NOT steam or treat over areas already treated unless instructed

These actions can interfere with the residual treatment and can void the warranty.

Key to Success

Your cooperation is essential. Following these instructions allows the treatment to work effectively and eliminate the infestation as quickly as possible.
